

**Component C. Personalized Project Reference.** 

## **Procedure:**

i.

```
def determine_winner(player_choice, computer_choice):
    global score

if player_choice == computer_choice:
    return "Tie"
elif(
        (player_choice == "rock" and computer_choice == "scissors") or
        (player_choice == "paper" and computer_choice == "rock") or
        (player_choice == "scissors" and computer_choice == "paper")
):
    score[0] += 1
    return "Player"
else:
    score[1] += 1
    return "Computer"
```

ii.

```
result = determine_winner(player_click, computer_choice)
if result == "Player":
    win(computer_choice)
elif result == "Computer":
    loss(computer_choice)
elif result == "Tie":
    tie(computer_choice)
```

## List:

i.

score = [0, 0]

ii.

```
print("-----")
print("Player Score:", score[0])
print("Computer Score:", score[1])
```
